

**Session Title:**

**Name: IIMURA Akiko**

**Position: Director General, Green Innovation Fund Projects Coordination Office**

**Abstract title: Overview of NEDO Green Innovation Fund Projects toward achieving the 2050 Carbon Neutrality**

**Abstract text (within 100 words):**

In October 2020, the Japanese government has declared to realize “Carbon Neutrality by 2050”. Under this initiative, the government will, once the public and private sectors share bold and specific goals, provide continuous support to companies committed to take on challenges toward achieving the goals, from R&D through demonstration to social implementation. To this end, the government has established a 2 trillion yen “Green Innovation Fund”. At this session, NEDO will be focusing on the activities of global supply chain carbon neutrality such as the construction of hydrogen and fuel ammonia supply chain and the development of next-generation vessels.
