Abstract title: Initiative of Tokyo Gas toward Carbon Neutrality (Implementation of E-methane)

Abstract text (within 100 words):

Carbon neutrality by 2050 has become a common goal for countries around the world, and Tokyo Gas is taking a variety of decarbonization actions and measures to achieve the carbon neutrality by 2050. To tackle this critical issue, we are carrying out highly effective use of natural gas, active use of renewable energy, CCUS, and employment of hydrogen. E-methane has a high affinity with gas industry and is very effective for decarbonization of city gas and heat demand area. We are actively promoting the practical implementation of e-methane, and in this seminar we will introduce our efforts in implementing e-methane.
