

**Session Title: Zero-emission vessels**

**Name: Peter Kirkeby**

**Position:**

Principal Specialist, Technical promotion

**Abstract title:**

Moving Big Things to Zero

**Abstract text (within 100 words):**

Decarbonization the maritime industry constitutes one of the largest transitions encountered, and the short deadline to succeed requires a united and committed approach from the entire supply chain from well to wake.

Taking our part in this transition and climate protection are at the heart of our strategy for the future.

Ammonia as a marine fuel is identified to offer a potential long-term fuel for two-stroke marine engines. As part of our strategy of decarbonization, MAN Energy Solutions works diligently towards designing the MAN B&W engine for operation on ammonia and offering retrofit conversions of existing two-stroke engines to ammonia.
