

Session Title:

Name: Giana Amador

Position: Cofounder and Policy Director, Carbon180

Abstract title:

Policy developments can support CDR technologies

Abstract text (within 100 words):

Our climate goals can only be met by rapidly reducing emissions and removing the carbon that already exists in our atmosphere. Every day, we work to leverage the size and power of the US government to scale carbon removal not just quickly, but well, with science and equity at the forefront. Using the same policy levers and finance mechanisms that helped pioneer past climate solutions, policymakers can fill in research gaps, drive down costs, and unlock private capital — all while ensuring practices meet the highest labor and environmental standards.
