

Tiffany Vass is a senior industry energy analyst in the Energy Technology Policy Division at the International Energy Agency in Paris, where she has worked for the past five years. Her work focuses broadly on industrial decarbonization through energy systems and technology analysis, modelling and policy analysis, including work on all of the main heavy industry subsectors. Publications contributed to include the IEA's Net Zero by 2050 Global Roadmap, a recent report on decarbonizing heavy industries in G7 members, technology roadmaps for steel and ammonia, among others. A Canadian national, she completed a Masters in Resource and Environmental Management with a focus on energy modelling at Simon Fraser University in Vancouver.
